Brief description of contents

Invoicing and Financial administration

- Easier selection of warehouse dimensions on documents

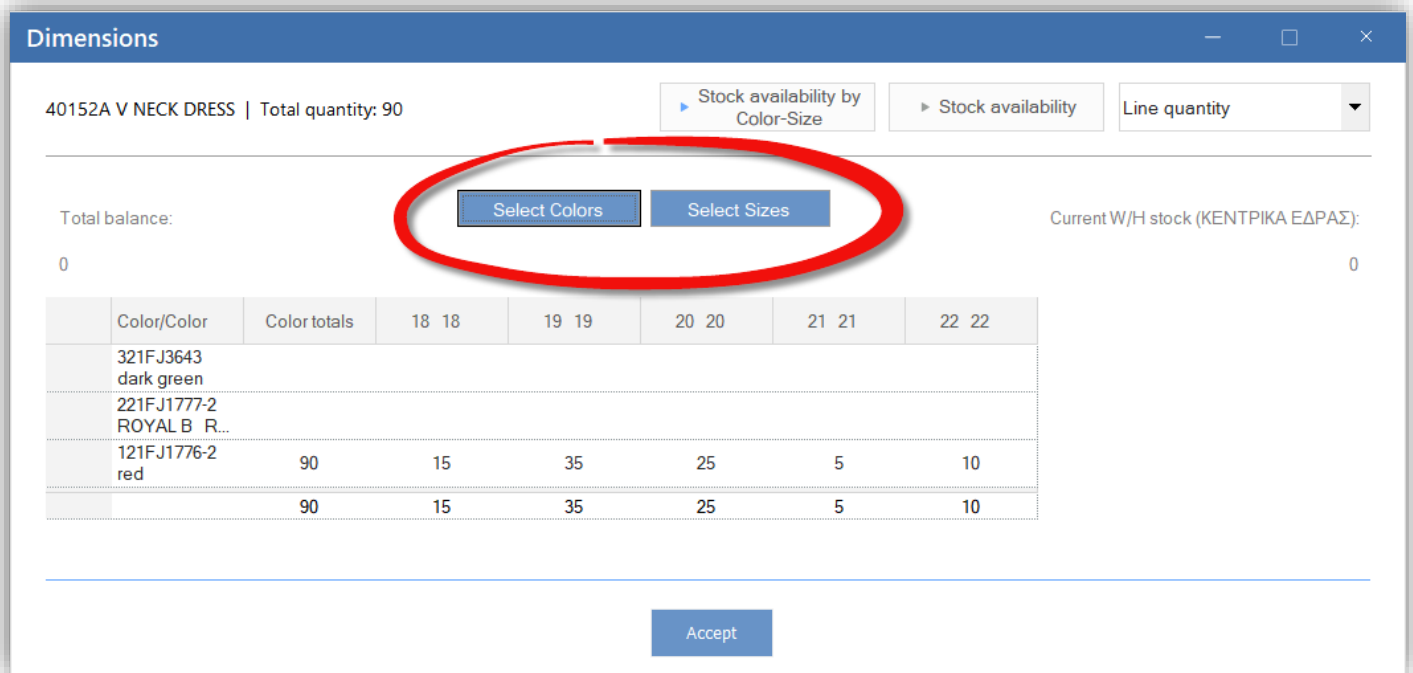

Next up, the new functionalities & improvements catalog is broken down per category, along with use instructions & examples.

1. Invoicing and Financial administration

1.1 Warehouse dimensions

New functionalities were given to the registration of documents with **warehouse items that track dimensions**, improving the user experience and reducing the time of registration of the document. Especially in cases where items with particularly large **size charts** or **color charts** are used in the document, you can now choose the dimension combinations in which you want to enter quantities, more easily, without having to locate them among dozens of color codes and sizes.

Specifically, when you use items that track **color and/or size** in the document, in the **quantity import dialog (F12)**, two buttons for selecting Colors and Sizes are now available:

Dimensions

40152A V NECK DRESS | Total quantity: 90

Stock availability by Color-Size | Stock availability | Line quantity

Total balance: 0

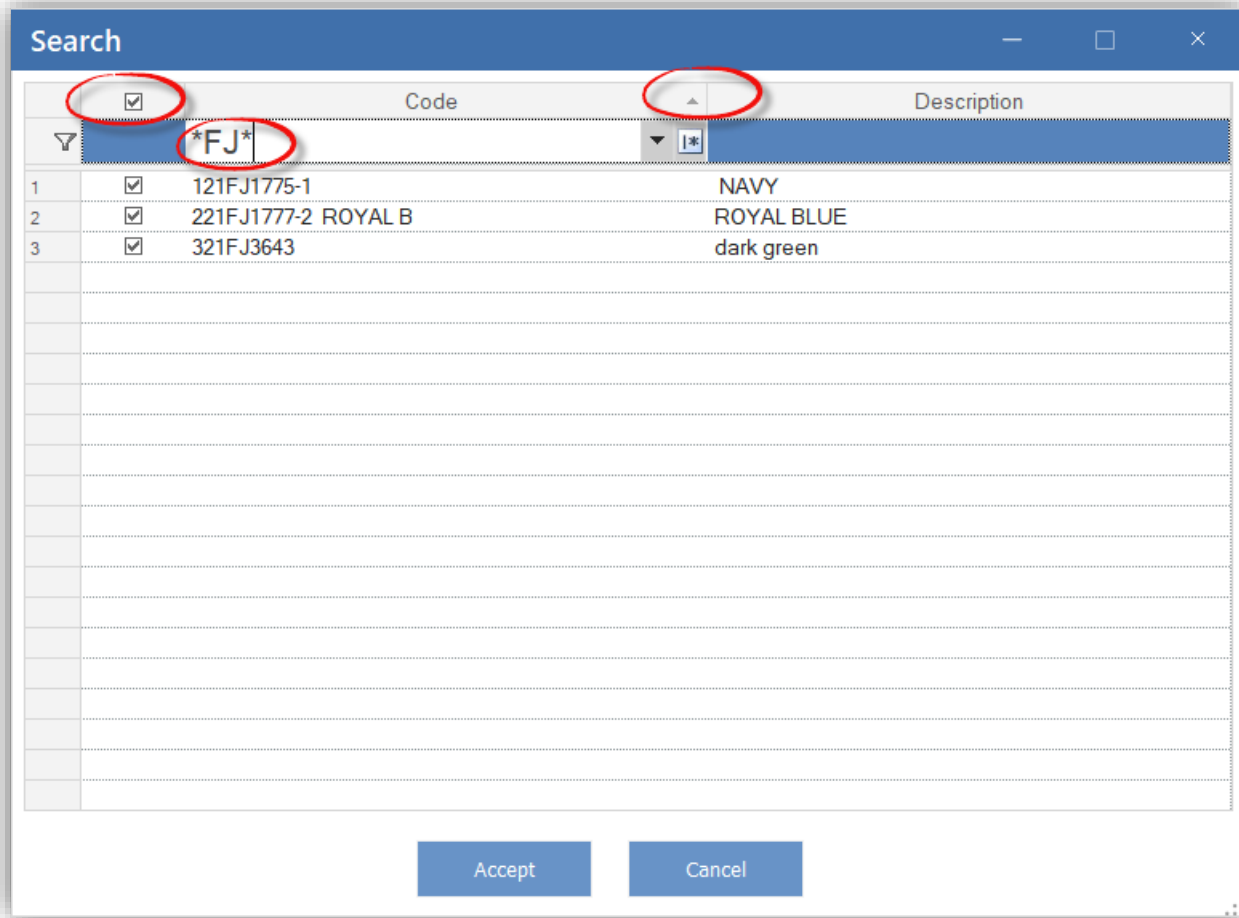

Current W/H stock (ΚΕΝΤΡΙΚΑ ΕΔΡΑΣ): 0

Color/Color	Color totals	18 18	19 19	20 20	21 21	22 22
321FJ3643 dark green						
221FJ1777-2 ROYAL B R...						
121FJ1776-2 red	90	15	35	25	5	10
	90	15	35	25	5	10

Accept

Initially, when in the item line you select an item that tracks color - size and then choose to display the quantity entry dialog by dimension, the **window will appear blank**. You will need to press one of the buttons to select the dimensions in which you want to enter quantities.

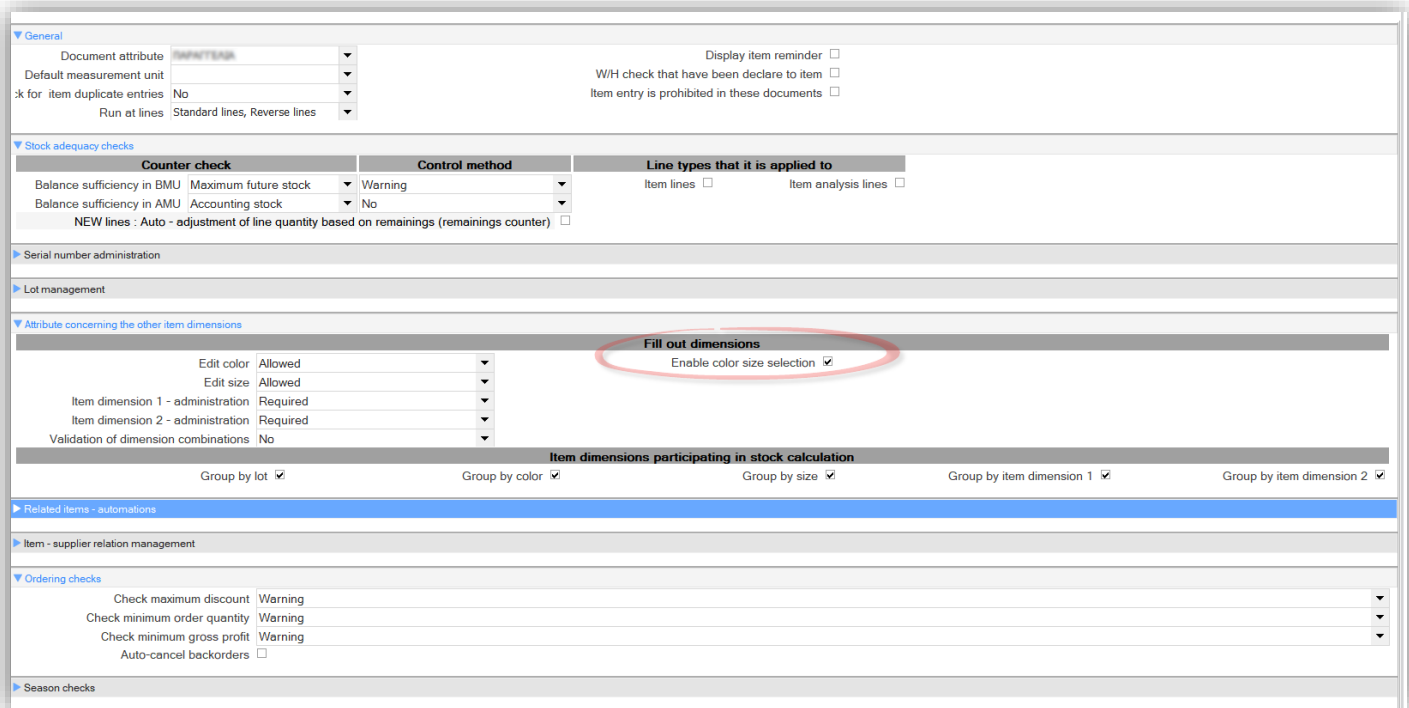

The dimension selection dialog supports **sorting** by selecting the heading and also allows you to apply a **filter** to easily locate the dimensions you want to select:

- ✚ The dimension selection window displays only those dimensions that have not yet been selected.
- ✚ It is not supported to remove a dimension through this window, but only to add more dimensions.
- ✚ This mode only makes sense to be activated on stock items that have a **particularly large number of dimension codes**, and their appearance on the grid makes it difficult to identify the combination you want to enter quantity.

Configuration

The activation of this way of entering quantities per dimension, can be activated for specific items and specific **types of documents**. The activation is done through the new field "**Activate selection of colors - sizes**" that has been added to the **item control policy window**

The screenshot shows the 'Item control policy window' with various tabs and sections. The 'Fill out dimensions' section is highlighted with a red circle, indicating the 'Enable color size selection' checkbox is checked. Other sections include 'General', 'Stock adequacy checks', 'Serial number administration', 'Lot management', 'Attribute concerning the other item dimensions', 'Item dimensions participating in stock calculation', 'Related items - automations', 'Item - supplier relation management', 'Ordering checks', and 'Season checks'.

1.2 Giftcards on fiscal printer

In this version, we supported the use of **gift cards** that are used instead of money, as payment methods, when using a fiscal printer. The printing of the receipt in a fiscal printer includes the all the relative information of the giftcards used in the receipt. This information is based on **voucher lines**, which contain vouchers that:

- ✓ Their selected type is "gift card"
- ✓ A **liquidity account** has been selected in the respected field in the voucher properties

When printing, coupons **are treated as payment methods** and as such are included in the printing of the voucher.
