Brief description of contents

Invoicing and Financial administration

- Various improvements | Item availability
- Various improvements | Retail - Show item photo

Horizontal functionality

- Various improvements

Next up, the new functionalities & improvements catalog is broken down per category, along with use instructions & examples.

1. Invoicing and Financial administration

1.1 Various improvements

Item availability

In the document screens configuration, a new action is now available:

Item availability (Dynamic) - GC_DOC_SHOW_STOCK_AVAILABILITY_DYNAMIC.

By using this action, it displays the balances of the particular item, either at the **item code** level for the selected item line, provided that the item is not monitoring dimensions, or **by warehouse dimensions analysis** of the item, provided that it monitors dimensions.

Retail – Show item photo

Regarding the dynamic document screens used in ESRetail, new special field **Show item photo** is now available, which the user can use to display the photo of the item on the screen, each time a different item line is selected. Naturally, the field displays the photo of the selected line item.

The screenshot displays the ESRetail interface. On the left, there is a list of items with columns for item name, quantity, unit, price, and total. The items listed are ΠΑΝΤΕΛΟΝΙ, ΜΠΛΟΥΖΑ, and ΜΠΟΥΦΑΝ. The ΜΠΛΟΥΖΑ item is highlighted in blue. To the right of the list, there is a grid of product categories: Μπουκάλι Νερό, Αρωμα Γυναικείο, Cappuccino, Best Seller, Μπουκάλι Κρασί, and Προσφορά Τηλεόραση. On the far right, there are three horizontal bars with labels: ΞΕΝΟΓΛΩΣΣΑ, HOME CINEMA, and ΟΙΚΙΑΚΕΣ ΣΥΣΚΕΥΕΣ. Below the list, there is a red arrow pointing to the ΜΠΛΟΥΖΑ item. To the right of the red arrow, there is a red arrow pointing to a photo of a black t-shirt. The photo is labeled 'Εμφάνιση φωτογραφίας είδους'.

Item Name	Quantity	Unit	Price	Total
ΠΑΝΤΕΛΟΝΙ	1,00	TEM	50,00	50,00
ΜΠΛΟΥΖΑ	1,00	TEM	15,00	15,00
ΜΠΟΥΦΑΝ	1,00	TEM	90,00	90,00

2. Horizontal functionality

2.1 Various improvements

- In the case where a mandatory version change is set on the Server, it is now possible for clients to automatically start synchronizing when logging in to EBS, as long as, in file CSConfig\ESClientConnect.xml file, the following parameter is set with value true:

```
<AutoExecClientSyncWhenCustomVerRequired>true</AutoExecClientSyncWhenCustomVerRequired>
```

This way, the dialog with asking about synchronization that may in some cases delay the user's login, is not displayed.

- It is now possible to set a printer in command ES00DOCUMENTS_COMMAND_PRINT_DOCUMENTS used in automations to print related documents, so that the printer selection window is not displayed when selecting a printer, like it did up until now.
